HTML Images

- HTML images are defined with the tag
- The source file (src), alternative text (alt), width, and height are provided as attributes:

```
<!DOCTYPE html>
<html>
  <body>

    <h2>HTML Images</h2>
    <p>HTML images are defined with the img tag:</p>

  </body>
</html>
```

HTML Images

HTML images are defined with the img tag:

Image Maps

```
<!DOCTYPE html>
<html>
<body>

  <h2>Image Maps</h2>
  <p>
    Click on the computer, the phone, or the cup of
    coffee to go to a new page and read more about the topic:
  </p>

  <map name="workmap">
    <area shape="rect" coords="34,44,270,350" alt="Computer"
    href="computer.htm">
    <area shape="rect" coords="290,172,333,250" alt="Phone"
    href="phone.htm">
    <area shape="circle" coords="337,300,44"
    alt="Cup of coffee" href="coffee.htm">
  </map>

</body>
</html>
```

Image Maps

Click on the computer, the phone, or the cup of coffee to go to a new page about the topic:

Image Maps

- with image maps, you can add clickable areas on an image
- the `<map>` tag defines an image-map
- an image-map is an image with clickable areas
- the idea behind an image map is that you should be able to perform different actions depending on where in the image you click
- to create an image map you need an image, and a map containing some rules that describe the clickable areas

Image Maps

- The image is inserted using the `` tag. The only difference from other images is that you must add a `usemap` attribute

```

```

- The `usemap` value starts with a hash tag `#` followed by the name of the image map, and is used to create a relationship between the image and the image map
- Then add a `<map>` element
- The `<map>` element is used to create an image map, and is linked to the image by using the `name` attribute

```
<map name="workmap">
```

- The `name` attribute must have the same value as the `usemap` attribute

Image Maps

- Then add the clickable areas
- A clickable area is defined using an `<area>` element
- You must define the shape of the area, and you can choose one of these values
 - **rect** - defines a rectangular region
 - **circle** - defines a circular region
 - **poly** - defines a polygonal region
 - **default** - defines the entire region

Image Maps

- **Rectangle shape**
- You must define some coordinates to be able to place the clickable area onto the image
- The coordinates come in pairs, one for the x-axis and one for the y-axis
- The coordinates 34, 44 is located 34 pixels from the left margin and 44 pixels from the top

Image Maps

- **Rectangle shape**
- The coordinates 270, 350 is located 270 pixels from the left margin and 350 pixels from the top
- Now you have enough data to create a clickable rectangular area

Image Maps : rectangle shape

```
<!DOCTYPE html>
<html>
<body>
  <h2>Image Maps</h2>
  <p>
    Click on the computer, to go to a new
    page and read more about the topic:
  </p>

  <map name="workmap">
    <area shape="rect" coords="34,44,270,350"
    alt="Computer" href="computer.htm">
  </map>
</body>
</html>
```

Image Maps

Click on the computer, to go to a new page and read more about the topic:

Image Maps

- **Circle Shape**
- To add a circle area, first locate the coordinates of the center of the circle

337, 300

Image Maps

- **Circle Shape**
- Then specify the radius of the circle

44 pixels

Image Maps : circle shape

```
<!DOCTYPE html>
<html>
<body>

  <h2>Image Maps</h2>
  <p>
    Click on the cup of coffee to go to a new
    page and read more about the topic:
  </p>

  <map name="workmap">
    <area shape="circle" coords="337,300,44"
    alt="Cup of coffee" href="coffee.htm">
  </map>

</body>
</html>
```

Image Maps

Click on the cup of coffee to go to a new page and read more about the topic:

HTML Tables

```
<table>
  <tr>
    <th>Company</th><th>Contact</th><th>Country</th>
  </tr>
  <tr>
    <td>Alfreds Futterkiste</td><td>Maria Anders</td>
    <td>Germany</td>
  </tr>
  <tr>
    <td>Centro comercial Moctezuma</td>
    <td>Francisco Chang</td><td>Mexico</td>
  </tr>
  <tr>
    <td>Ernst Handel</td><td>Roland Mendel</td>
    <td>Austria</td>
  </tr>
  <tr>
    <td>Island Trading</td><td>Helen Bennett</td>
    <td>UK</td>
  </tr>
</table>
```

```
<style>
  table {
    font-family: arial, sans-serif; border-collapse: collapse;
    width: 100%;
  }
  td, th {
    border: 1px solid #dddddd; text-align: left;
    padding: 8px;
  }
  tr:nth-child(even) {
    background-color: #dddddd;
  }
</style>
```

Company	Contact	Country
Alfreds Futterkiste	Maria Anders	Germany
Centro comercial Moctezuma	Francisco Chang	Mexico
Ernst Handel	Roland Mendel	Austria
Island Trading	Helen Bennett	UK

HTML Tables

- defined with the `<table>` tag
- Each table row is defined with the `<tr>` tag
- A table header is defined with the `<th>` tag
- By default, table headings are bold and centered
- A table data/cell is defined with the `<td>` tag

HTML Table – Adding a border

- If you do not specify a border for the table, it will be displayed without borders
- A border is set using the CSS border property

```
<style>
  table, th, td {
    border: 1px solid black;
  }
</style>
<table style="width:100%">
  <tr>
    <th>Firstname</th><th>Lastname</th>
    <th>Age</th>
  </tr>
  <tr>
    <td>Jill</td><td>Smith</td><td>50</td>
  </tr>
  <tr>
    <td>Eve</td><td>Jackson</td><td>94</td>
  </tr>
  <tr>
    <td>John</td><td>Doe</td><td>80</td>
  </tr>
</table>
```

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

HTML Table - Collapsed Borders

```
<style>
table, th, td {
  border: 1px solid black;
  border-collapse: collapse;
}
</style>
<table style="width:100%">
  <tr>
    <th>Firstname</th><th>Lastname</th>
    <th>Age</th>
  </tr>
  <tr>
    <td>Jill</td><td>Smith</td><td>50</td>
  </tr>
  <tr>
    <td>Eve</td><td>Jackson</td><td>94</td>
  </tr>
  <tr>
    <td>John</td><td>Doe</td><td>80</td>
  </tr>
</table>
```

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

HTML Table - Adding Cell Padding

- Cell padding specifies the space between the cell content and its borders.
- If you do not specify a padding, the table cells will be displayed without padding
- To set the padding, use the CSS padding property or use cellpadding attribute of table element
 - `table{ cellpadding="10" }` or
 - `table, td{ padding : 10px }`

```
<table style="width:100%" cellpadding="10">
  <tr>
    <th>Firstname</th><th>Lastname</th><th>Age</th>
  </tr>
  <tr>
    <td>Jill</td><td>Smith</td><td>50</td>
  </tr>
  <tr>
    <td>Eve</td><td>Jackson</td><td>94</td>
  </tr>
  <tr>
    <td>John</td><td>Doe</td><td>80</td>
  </tr>
</table>
```

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

HTML Table - Adding Cell Padding

```
<style>
  th, td {
    padding: 15px;
  }
</style>
<table style="width:100%">
  <tr>
    <th>Firstname</th><th>Lastname</th>
    <th>Age</th>
  </tr>
  <tr>
    <td>Jill</td><td>Smith</td><td>50</td>
  </tr>
  <tr>
    <td>Eve</td><td>Jackson</td><td>94</td>
  </tr>
  <tr>
    <td>John</td><td>Doe</td><td>80</td>
  </tr>
</table>
```

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

HTML Table - Left-align Headings

```
th {  
    text-align: left;  
}
```

Left-align Headings

To left-align the table headings, use the CSS text-align property.

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

HTML Table - Adding Border Spacing

- html table attribute

```
table {  
  border-spacing: 15px;  
}
```

- CSS

```
<table style="width:100%" cellpadding="15">  
  <tr>  
    <th>Firstname</th>  
    <th>Lastname</th>  
    <th>Age</th>  
  </tr>  
  <tr>  
    <td>Jill</td>  
    <td>Smith</td>  
    <td>50</td>  
  </tr>  
  <tr>  
    <td>Eve</td>  
    <td>Jackson</td>  
    <td>94</td>  
  </tr>  
  <tr>  
    <td>John</td>  
    <td>Doe</td>  
    <td>80</td>  
  </tr>  
</table>
```

- **Note:** If the table has collapsed borders, border-spacing has no effect.

Border Spacing

Border spacing specifies the space between the cells.

Firstname	Lastname	Age
Jill	Smith	50
Eve	Jackson	94
John	Doe	80

HTML Table - Cells that Span Many Columns

```
<table style="width:100%">
  <tr>
    <th>Name</th>
    <th colspan="2">
      Telephone
    </th>
  </tr>
  <tr>
    <td>Bill Gates</td>
    <td>55577854</td>
    <td>55577855</td>
  </tr>
</table>
```

Cell that spans two columns

To make a cell span more than one column, use the colspan attribute.

Name	Telephone	
Bill Gates	55577854	55577855

HTML Table - Cells that Span Many Rows

```
<table style="width:100%">
  <tr>
    <th>Name:</th>
    <td>Bill Gates</td>
  </tr>
  <tr>
    <th rowspan="2">
      Telephone:
    </th>
    <td>55577854</td>
  </tr>
  <tr>
    <td>55577855</td>
  </tr>
</table>
```

Cell that spans two rows

To make a cell span more than one row, use the rowspan attribute.

Name:	Bill Gates
Telephone:	55577854
	55577855

HTML Table - Adding a Caption

```
<table style="width:100%">
  <caption>Monthly savings</caption>
  <tr>
    <th>Month</th>
    <th>Savings</th>
  </tr>
  <tr>
    <td>January</td>
    <td>$100</td>
  </tr>
  <tr>
    <td>February</td>
    <td>$50</td>
  </tr>
</table>
```

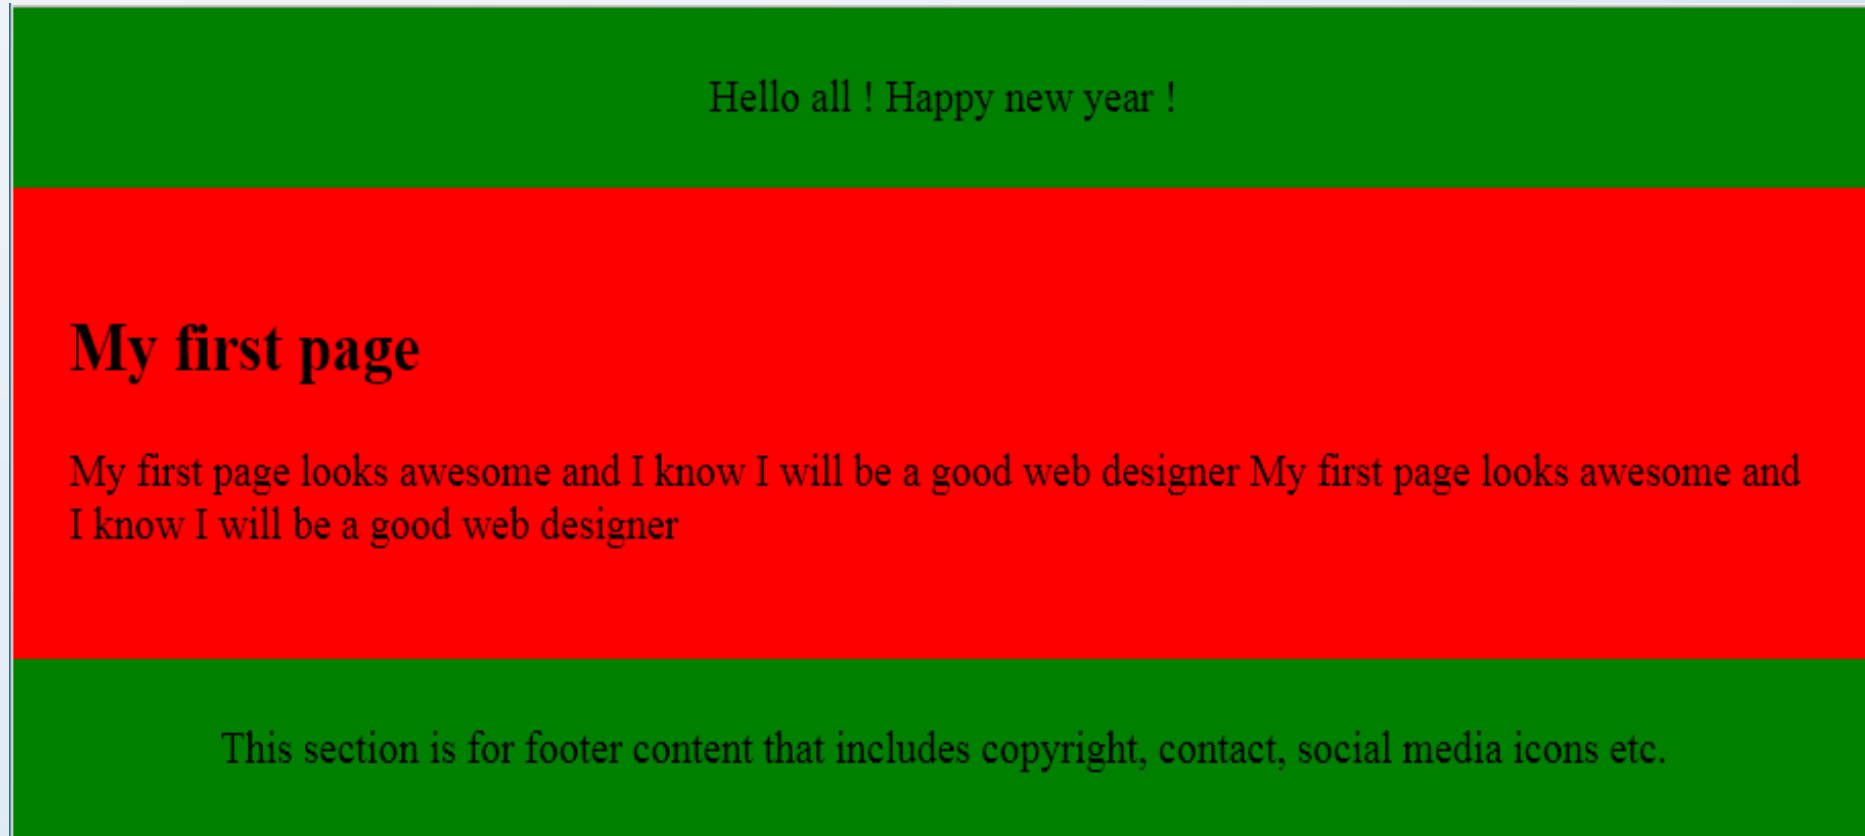

Table Caption

To add a caption to a table, use the caption tag.

Month	Savings
January	\$100
February	\$50

Exercise 1

- Create a web page called index.html and make a website with header main container and footer with appropriate css properties.

Exercise 1 Solution

```
<!DOCTYPE html>
<html>
<head>
  <title>My First Web Page</title>
  <link rel="stylesheet" type="text/css" href="main.css">
</head>
<body>
  <div class="header">Hello all ! Happy new year !</div>
  <div class="container">
    <h2>My first page</h2>
    <p>My first page looks awesome and I know I will be a good web designer </p>
  </div>
  <div class="footer">
    copyright, contact, social media icons etc.
  </div>
</body>
</html>
```

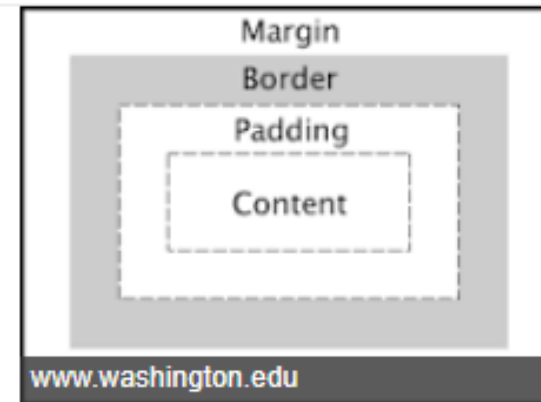

```
body{ margin: 0; padding: 0; font-size: 20px; }
.header{ background-color: green; padding: 3%; text-align: center; }
.container{ background-color: red; padding: 3%; }
.footer{ background-color: green; padding: 3%; text-align: center; }
```

Box Model

The CSS **Box Model**. All HTML elements can be considered as **boxes**. In CSS, the term "**box model**" is used when talking about design and layout. The CSS **box model** is essentially a **box** that wraps around every HTML element. It consists of: margins, borders, padding, and the actual content.

EMBED CUSTOMIZE Load Time **Fast**

Embed Font

To embed your selected fonts into a webpage, copy this code into the `<head>` of your HTML document.

STANDARD @IMPORT

```
<link href="https://fonts.googleapis.com/css?family=Lobster" rel="stylesheet">
```

Specify in CSS

Use the following CSS rules to specify these families:

```
font-family: 'Lobster', cursive;
```

For examples of how fonts can be added to webpages, see the [getting started guide](#).

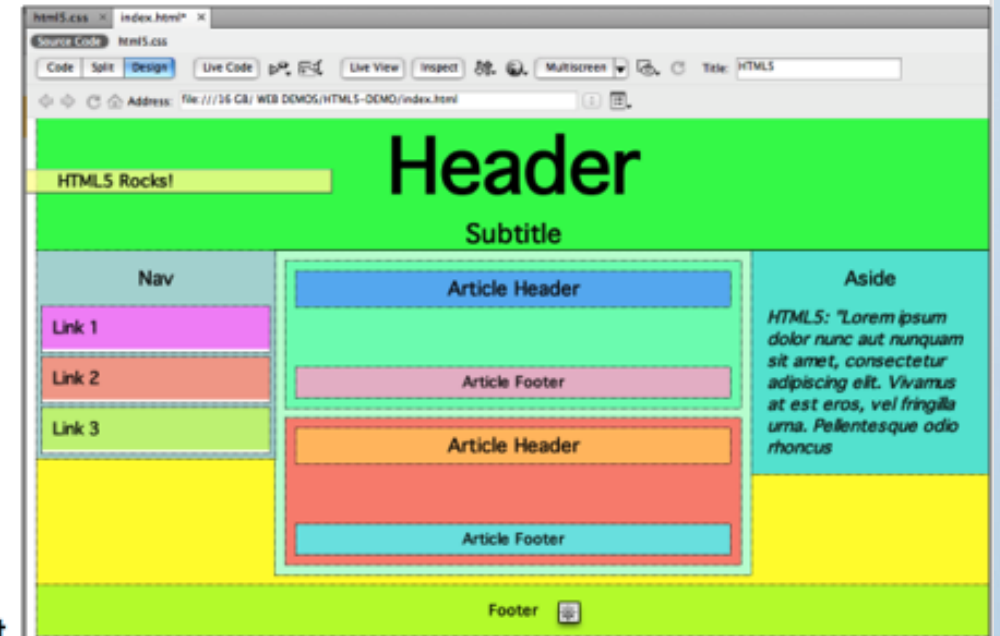

Common HTML5 Tags

- header
- footer
- nav
- article
- article header
- section
- aside
- H1 – H6

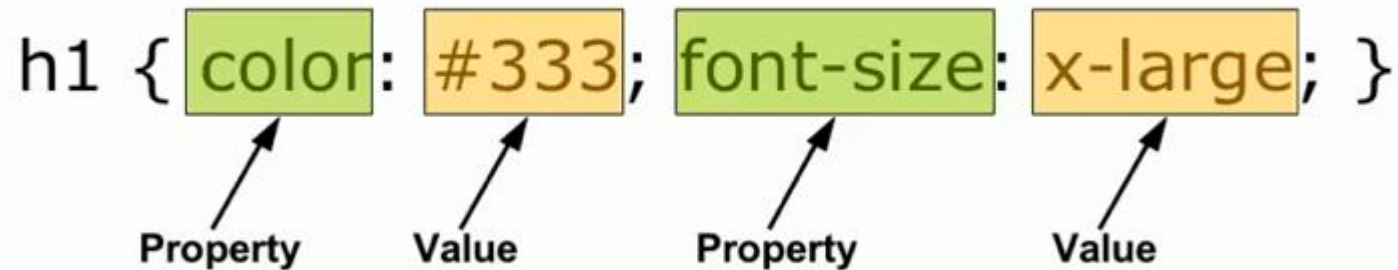

HTML5

structural/sectioning tags

<code><section></code>	sections
<code><nav></code>	sections for navigation
<code><footer></code>	for content section
<code><header></code>	section heading
<code><h1> - <h6></code>	headings
<code><article></code>	main sections for content
<code><article header></code>	sections for navigation
<code><aside></code>	sections for sidebars

CSS : Selector { property : value ; }

The diagram illustrates the components of a CSS rule: `h1 { color: #333; font-size: x-large; }`. The text is enclosed in a white box. Within the curly braces, the text is divided into four colored segments: a green box for `color`, an orange box for `#333`, a green box for `font-size`, and an orange box for `x-large`. Below the first green box is the label **Property** with an arrow pointing to `color`. Below the first orange box is the label **Value** with an arrow pointing to `#333`. Below the second green box is the label **Property** with an arrow pointing to `font-size`. Below the second orange box is the label **Value** with an arrow pointing to `x-large`.

h1 { color: #333; font-size: x-large; }

Property Value Property Value

The Selector and the Rule

CSS Selector Basics

CSS Selectors

Selector	Example	Example description
.class	.intro	Selects all elements with class="intro"
#id	#firstname	Selects the element with id="firstname"
*	*	Selects all elements
element	p	Selects all <p> elements

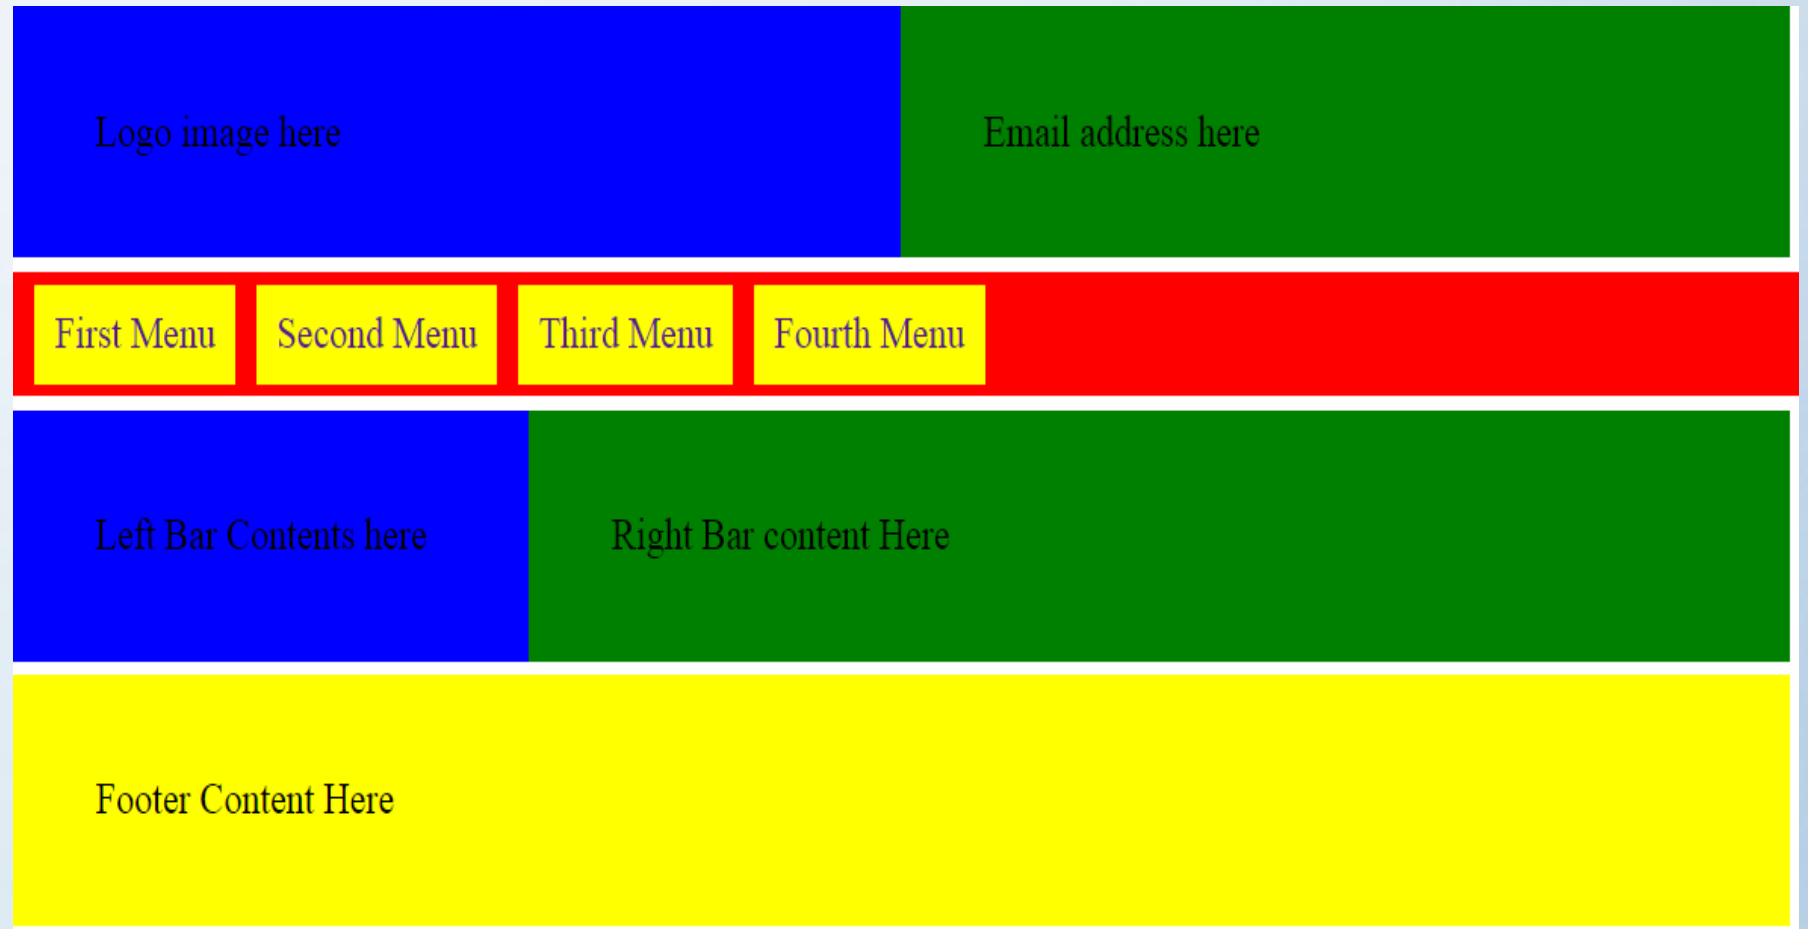

48 more rows

[CSS Selectors Reference - W3Schools](https://www.w3schools.com/cssref/css_selectors.asp)

https://www.w3schools.com/cssref/css_selectors.asp

Exercise 2

- Create a web page as in figure.

Exercise 2 Solution

```
<body>
  <header>
    <div>Logo image here</div>
    <div>Email address here</div>
    <div class="clear"></div>
  </header>
  <nav>
    <ul>
      <li><a href="#">First Menu</a></li>
      <li><a href="#">Second Menu</a></li>
      <li><a href="#">Third Menu</a></li>
      <li><a href="#">Fourth Menu</a></li>
      <div class="clear"></div>
    </ul>
  </nav>
  <section>
    <div>
      Left Bar Contents here
    </div>
    <div>
      Right Bar content Here
    </div>
    <div class="clear">
  </section>
  <footer>
    Footer Content Here
  </footer>
</body>
```

```
body{ margin:0; }
header{}
header div:first-child{padding: 4%; background: blue; width:35%; float: left;}
header div:nth-child(2){padding: 4%; background: green; width:35%; float: left;}
.clear{ clear: both; }

nav{background: red}
nav ul{margin: 5px; padding: 0;}
nav ul li{
  list-style: none; float: left; margin: 0.5%; padding: 1%; background: yellow
}
nav ul li a{text-decoration: none; display: block; width: 100%;}
nav ul li:hover{background: lightgreen;}

section{}
section div:first-child{padding: 4%; background: blue; width:17%; float: left;}
section div:nth-child(2){padding: 4%; background: green; width:53%; float: left;}

section{}
footer{padding: 4%; background: yellow; margin-top: 0.5%; width: 78%;}
```
